The Bentley 150 consists of a proprietary optical infrared analysis system and an integrated high-speed computer. To measure specific components within milk products, the instrument measures the energy absorption at specific wavelengths in the mid-IR region.

Operators use computer controls to vary the pump and analysis speed, directing the system to operate at a slower speed when processing products of high viscosity.

Flexible data output options

Optional autosampler for fully automatic operation

Available with Fat “A” and Fat “B”

Optional freezing point depression (FPD)

Low maintenance design

Accurate, compact, fast and reliable, the Bentley 150 is ideal for labs with small to medium testing requirements.

Operator friendly software with graphic user interface (GUI) help make the system easy to operate.

The flexible design of the instrument allows it to be used as a product analyzer capable of testing a wide variety of fluid dairy products.

Instrument durability allows for use in high volume testing environments.

State-of-the-art design utilizes few moving parts, making the system very easy to maintain.

Small, compact size and integrated computer reduces the amount of bench space needed, allowing the system to be used in the smallest of labs.

Specifications for typical raw milk samples.
Innovative Design
- Computer controls allow the operator to adjust the speed of the system for testing products of high viscosity.
- Easily handles multiple calibrations to optimize accuracy in testing different products.
- Highly accurate analysis of energy absorption at specific wavelengths of the mid-IR region.
- Programmable screen layout allows the operator to choose up to eight windows to display component values both measured and calculated.

Optional Automated Sample Input
With the optional automated sample handling, the Bentley 150 will provide a complete and highly automated lab procedure, where the work process is easily incorporated into the routine.
- The auto-sampler can handle most standard vial sizes.
- Optional bar-code readers can be attached to the input tray for automatic sample identification.

Data Output To Screen, Printer or Network
Measurement data from the Bentley 150 can be printed on almost any type of printer via the serial & parallel ports. Multiple data output options support most of the standard host-remote solutions used in the industry today.
